

Turnkey, automated, cloud-based, mobile software platform for consumers, NGOs, Government Agencies and leading Brands to go mobile in Africa

Next2 Nokia Mobile Symbian Application

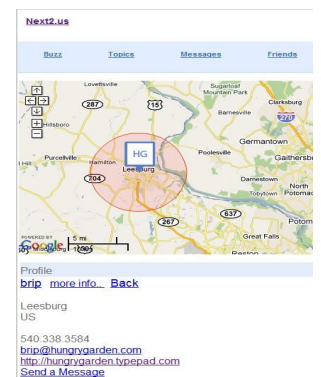

With Next2’s Nokia Mobile Symbian Application mobile phone users interact with easy-to-use menus to compose and send text messages to update their Next2 account. Subscribers can register an identity for their mobile phone, mark location on map, establish sharing circle around their location and automatically exchange text messages with other subscribers.

Application Menu

Geo-aware Social Networking

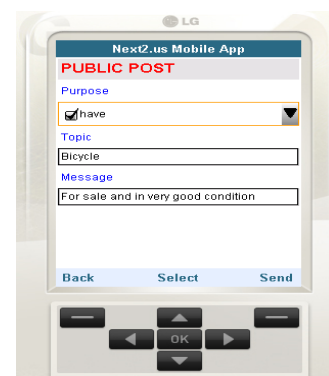

Next2 is based on the premise that people that live near each other usually share common interests and experiences. Therefore, it makes sense to first look to family, friends and neighbors nearby when searching for answers. Next2 lets subscribers set a ‘smart geo-fence’ sharing circle around their location and share content. This ‘geo-awareness’ is at the heart of the Next2 Nokia Mobile Symbian Application.

Next2 Subscriber Geosocial Map

“Intelligent” Message Processing

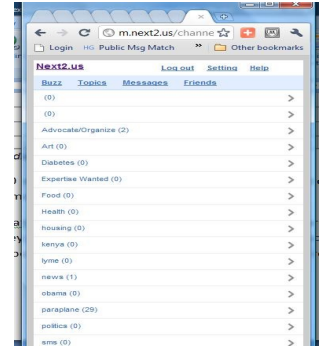

Next2 lets subscribers signal what they have, want or would like to talk about with others. Subscribers can text both public and private text message for auto-exchange. New messages are processed in “near-time.” When a match is found messages are automatically exchanged between users without revealing their mobile phone number. Public message appear at the subscriber’s Next2 web page. Private messages are only exchanged on mobile phones.

Pubic Post Menu

SMS, Mobile Web, Mobile Applications

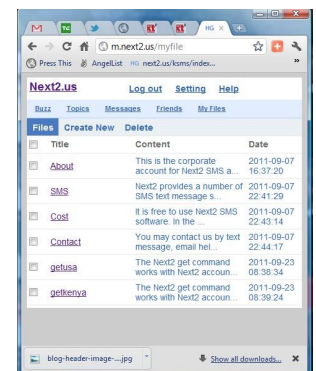

Access all Next2's great features in the way you want to whether that be by SMS, mobile web, or Next2's new Nokia Mobile Symbian Application. Communicate with other Next2 users irrespective of their device or location. Even simple non-internet enable mobile phones can use Next2's Web2SMS messaging to send and receive messages with internet users around the corner or across the globe.

Geo Browse Topics

SMS Keyword Auto-Messages

Turn you Next2 identity into a SMS keyword auto-messaging service with our new SMS “get” command. Subscriber can create an unlimited number of keywords with up to 800 characters per message (that's 5 text messages). Anyone can text “get identity” to get your list of keywords. Then text “get identity keyword” to get that keyword's message. Version 2 of Next2's Nokia Mobile Symbian Application will have the “get” command built right in!

SMS “Get” Keyword List and Messages

“Custom Branded Nokia Symbian Applications

The Next2 service is marketed through leading NGOs, government agencies and corporate marketing partners who want to use Next2 geo-fence application and our SMS keyword auto-responders to reach their core audience or customers. The Next2 Nokia Mobile Symbian Application can be “branded” with our marketing partners corporate identity and keyword list pre-loaded in the application.
